Securing Cloud Innovation

Securing a digital transformation or cloud adoption journey is often an exercise in tension, as each organisation searches for their particular

balance of innovation and risk. As the external threats continue to mount, given the evolution of the cloud threat landscape, CISO and leaders are faced with re-evaluating the people, processes and technology required to keep cloud environments safe. This session will involve a frank and open discussion of both the threats without, as well as the challenges within, and suggest practical advice for organisations looking to mature their cloud security posture. Inclusive will be an analysis of some real world cloud breaches, so that we might share hard-won lessons learnt, and further insights from industry peers.
