FROM PILOTS TO PRODUCTION: DIGITAL WORKFORCE MANAGEMENT FOR THE ENTERPRISE

September 30, 2025

5:30 PM-9:00 PM

Eastern Time

Many enterprises have proof-of-concepts for AI agents, but few have a managed digital workforce operating across lines of business with clear roles, guardrails, and ROI. This executive briefing introduces Digital WorkforceIQ (Digital Workforce Management)—an Azure-native approach to provisioning, orchestrating, and governing autonomous and semiautonomous agents at scale. We'll explore how to treat agents like employees—onboard, assign, supervise, and continuously improve—while enforcing policy-as-code, human-in-the-loop controls, and full auditability.

Drawing on Neudesic's reference architecture (Knowledge Fabric, Nexus Core & Exchange, Sentry, Orchestrator) and Microsoft's secure cloud foundation, we'll walk through real-world patterns that accelerate time-to-value without compromising compliance. Leaders will learn how to identify high-value workflows, establish an AI operating model, and connect agent actions to measurable business outcomes.

Attendees will leave with a governance checklist, a 90day adoption plan, and an executive narrative to move from experiments to enterprise wide impact.
