AI in Supply Chain and Manufacturing: Separating Fact from Fiction

9:00 AM-11:00 AM

AI is one of the hottest topics in supply chain and manufacturing today. According to some pundits, exciting innovations in machine learning and generative AI will transform how we design and orchestrate our supply chains to improve resiliency and how we improve manufacturing quality, efficiency, and output. Others claim that AI is an overhyped and potentially dangerous distraction as we grapple with post-pandemic market challenges.

As supply chain and manufacturing leaders, how can we sift through the noise to find realistic opportunities to apply AI in our businesses? Join AWS and ZS for a candid discussion with your peers as we attempt to separate fact from fiction.

During this session, you will learn about:

Practical opportunities to utilize AI to tackle typical supply chain and manufacturing challenges

Strategies for accelerating the adoption of AI in your business and overcoming common limitations in technology and systems, data, organizational culture and training

Advances on the horizon and how to prepare to capitalize on future innovations

Resources for learning more about AI and keeping a pulse on industry best practices
