Modernizing IT to deliver measurable business value

Digital transformation is no longer optional - it has become a key differentiator. Organisations can no longer avoid rethinking their IT environment. Achieving real business value often involves migrating to the cloud where appropriate, while modernising existing and new systems to enhance efficiency and agility. The roundtable discussion will explore how organisations at different stages of their cloud journey can modernise their IT into a profit center. The discussion will focus on accelerating innovation without compromising security, using a prevention-first approach. Building on this foundation, we will examine how Agentic AI on AWS can support strategic decision-making, enable intelligent automation, and generate tangible business outcomes. This peer-to-peer roundtable brings together IT executives to share insights, discuss best practices, and explore actionable approaches for realising measurable value from cloud migration and IT modernisation.
