Building Intelligent Manufacturing at Scale: SAP, Cloud, and Agentic AI

Manufacturing leaders are navigating increasing pressure to modernize core systems while improving agility, resilience, and operational intelligence across the value chain. As SAP modernization, cloud infrastructure, and agentic AI converge, organizations have a timely opportunity to build more adaptive, self-optimizing manufacturing operations.

Join select manufacturing executives for an exclusive, curated conversation over a refecation focused on the strategic implications of intelligent manufacturing. Through candid, peer-led discussion, participants will explore how cloud-enabled architectures and AI-driven capabilities are being applied to modernize SAP environments, enhance real-time decision-making, and drive scalable innovation across production and supply chain operations.
