RETAIL EXPERIENCE TRANSFORMATION WITH CLOUD & EDGE AI

May 07, 2026

5:30 PM-9:00 PM

Eastern Time

AI is rapidly reshaping retail, and the advantage goes to those who deploy it with clear strategy and purpose. Leading brands use cloud and edge AI to deliver real-time, personalized experiences at scale—from frictionless checkout and intuitive voice interfaces to vision-driven merchandising that boosts conversion. The results are tangible: higher customer satisfaction, faster transactions, and improved operational efficiency. But as these innovations expand, retailers face a new challenge how to scale and sustain them without introducing significant cost, complexity, and operational strain.

This executive roundtable brings together C-level retail leaders to explore how to move beyond pilots and turn AI into a reliable, profitable capability across the enterprise. The discussion will focus on operationalizing AI at scale, which involves managing distributed environments, maintaining consistent performance, and aligning IT, operations, and finance teams while strongly focusing on ROI. Join peers for a candid conversation on how to

bridge the gap between innovation and execution, and how leading retailers are transforming AI from experimentation into a true competitive advantage.
