Maximizing Innovation, Minimizing Risk: Securing AI for the Modern Enterprise

The rapid adoption of artificial intelligence (AI) across all business functions presents a significant opportunity for innovation and efficiency. However, this transformative technology also introduces new and complex security challenges that are top of mind for C-suite executives. From generative AI data leakage to sophisticated AI-driven cyberattacks, the risks are substantial and demand a proactive, strategic approach.

This session will focus on the growing need for a robust AI security posture, moving beyond simple policy restrictions to enabling employees to maximize AI usage safely.
