Securing the Software-Driven 'New Normal' During
Massive Digital Transformation

www.cvisionintl.com

In the past year, software-driven organizations have faced some of the biggest challenges in order to keep pace with the digital transformation they are experiencing. As a result, moving to new software development methodologies like DevOps to speed time to market - while doing it securely - is now top of mind. The need to better serve clients digitally is imperative and software developers and AppSec teams are expected to deliver increasingly secure applications to do so. Therefore, CISO's of software-driven organizations are being tasked with taking immediate actions to improve application security without slowing development and time to release.

Join this session with a group of your peers to learn how they're managing:
Latest approaches to add security during development beyond the traditional measures.
Ensuring your application security strategies will meet current and future demands.
New secure application development practices to meet the requirements of the new normal.

PANELISTS

Chair

Larry Whiteside
Co-Founder & President
Cyversity

Speaker

Richard Rushing
CISO
