# ISTARI

The secret to ISTARI's innovative approach is addressing cyber challenges via a combination of advisory, portfolio company innovation, and education.

_____

### Advisor

As advisors, we aim to navigate your business on its journey towards cyber resilience. ISTARI's advisory team was founded by classically trained top-tier consultants from the Big 4 and other esteemed firms.

### Investor

We were founded by Temasek via a $2 bn investment in 2019. To date, we have invested approximately $1bn, with another $1bn remaining to commit. By partnering with key VC firms (Team8, SYN Ventures, TenEleven Ventures), ISTARI maintains a line of sight to the technologies and solutions best positioned to aid our clients.

### Educator

In collaboration with Cambridge Judge Business School, ISTARI delivers immersive programs around the world that combine theory with real-world practice.

### The market is broken.

Digitalization is forcing organizations to navigate an increasingly fragmented vendor market to address their expanding attack surface. As a result, we know you have more technology to manage than ever before. Exacerbating this is the efficacy gap and lack of available talent in the industry.

### Key challenges ISTARI addresses

1. Increase the effectiveness of cybersecurity investments to protect critical information assets.

2. Manage third-party risk across supplier ecosystem.

3. Uplift cyber defense capabilities to manage dynamic threat landscape.

4. Operationalize cybersecurity strategy to establish robust architecture and operational resilience.

5. Deliver transformation to drive modernization, reduce cyber spend and mitigate risks.

# The ISTARI Collective

### SYGNIA

Elite cyber technology and services company, providing cyber testing, defense consulting and incident response.

### BlueVoyant

SaaS-based cybersecurity services company specializing in Supply Chain Defense, Managed Detection and Response, and Digital Risk Protection.

### CLAROTY

Leading industrial cybersecurity platform to drive visibility, continuity and resiliency for XIoT, medical devices and BMS.

### axio

Decision-making cyber risk platform for cyber risk quantification, risk decision making and cyber risk prioritization.

### Prevalent AI

Applying Security Data Science to help companies understand, deploy and support large cyber data sets by leveraging AI/ML.

### ARMIS.

Asset intelligence cybersecurity platform that protects the extended attack surface of any organization with a comprehensive, modular approach.

### sonraí SECURITY

Enterprise-class Cloud Infrastructure Entitlement Management (CIEM) and Cloud Permissions Firewall.

### ENSIGN INFOSECURITY

Asia's largest cybersecurity professional services company, providing System Integration and Managed Security Services

*"ISTARI's flexibility to change makes it stand out – we frequently fine-tuned the approach. The team is very agile, and my organization needed that. It is quite refreshing."*

**– Global Technology Lead, Fortune 500 Company**

*"I didn't want more tools. I wanted a trusted advisor to tell me where we were exposed and to tell me what we needed to do. ISTARI came in and looked at everything. They carried out a mock adversarial attack on us, and we received an overall score. This provided tangible evidence that we needed to change."*
